---

“I’ve spent over eight years in both clinical and hospital settings in Occupational/Employee Health, Oncology, Aesthetics, Internal Medicine, Homecare, Primary care, Pain management and Rehabilitation. I have also had special training in cosmetic procedures. I feel fortunate to have had such diverse experience in both inpatient and outpatient settings. This background has truly broadened my perspective on my strengths and has helped me to appreciate the vast scope of medicine and the good that can be accomplished in this field.

“I truly enjoy the work I do on a day to day basis and feel very fortunate to be able to help so many people improve their lives. There is something very special in the world of medicine to be able diagnose and treat the illnesses patients experience and an exceptional satisfaction in helping patients overcome their difficulties.

“My experience in cosmetic medicine has given me the opportunity to help my patients look their best and extend my knowledge of botulin toxin in our treatment of Migraine and other painful dystonias we see in Neurology. Experience in pain management and rehabilitation enables me to better guide my patients toward more accurate diagnoses. This familiarity helps me better and more effectively provide treatment options to help patients more rapidly and successfully overcome their pain and increase their mobility and overall functioning. I look forward to working with you to do all I can to help your healing and give you a happier, healthier and more productive life!”

Highly advanced, skilled & experienced care.
